

LISTING OF THE CLAIMS

1. (Currently Amended) An indwelling analyte sensor, comprising:
 - an electrochemically active surface;
 - at least one nub of dielectric material extending outwardly from said electrochemically active surface; and
 - a membrane system comprising an enzyme, said enzyme-containing membrane system adhering to, and surrounding, said electrochemically active surface and said nub.
2. (Previously Presented) The sensor of claim 1, wherein at least one of said at least one nub is in the form of a plate.
3. (Original) The sensor of claim 1, wherein said electrochemically active surface is defined as part of a lengthwise body.
4. (Original) The sensor of claim 3, wherein said lengthwise body is circular in cross-section.
5. (Cancelled).
6. (Previously Presented) The sensor of claim 1, wherein at least one of said at least one nub comprises an annular plate.
7. (Previously Presented) The sensor of claim 1, wherein at least one of said at least one nub is displaced longitudinally from said electrochemically active surface.
8. (Previously Presented) The sensor of claim 1, wherein said membrane system includes multiple membranes.

9. (Currently Amended) The sensor of claim 1, wherein said ~~membrane system enzyme~~
~~comprises includes an enzyme layer.~~

10-19. (Cancelled).

20. (Previously Presented) The sensor of claim 1, wherein said at least one nub
comprises a plurality of nubs.

21. (Previously Presented) The sensor of claim 20, wherein said electrochemically
active surface extends through at least two of said plurality of nubs.

22. (Previously Presented) The sensor of claim 20, wherein said membrane system
defines a substantially catenary curve-shaped surface between at least two of said
plurality of nubs.

23. (Previously Presented) The sensor of claim 20, wherein said membrane has an
outer surface and said outer surface defines a concave curve curving toward said
electrochemically active surface between at least two of said plurality of nubs.

24. (Previously Presented) The sensor of claim 1, wherein said membrane system
defines an external surface of said sensor.

25. (Previously Presented) The sensor of claim 1, wherein said electrochemically active
surface comprises platinum.

26. (Previously Presented) The sensor of claim 1, wherein said at least one nub
comprises polyimide.

27. (Previously Presented) The sensor of claim 9, wherein said membrane system further comprises a permselective layer.

28. (Previously Presented) The sensor of claim 9, wherein said membrane system further comprises an interferent excluding layer.
